

# How a sign-in travels through Tula

One contract, three native front ends. The server decides the next step and each platform draws it natively.

Sign in with email, a social account or a passkey: the API answers with a step such as **needs\_second\_factor**, and the SDK shows the matching native screen.

Your brand. Your colors.  
Their sign-in, done.

Every screen picks up your theme tokens on web, iOS and Android.
